

ARIP User Guide

Academic Recognition Intelligence Platform

This guide helps you use ARIP (Academic Recognition Intelligence Platform) based on your role. Select your user type below to find the relevant instructions.

Choose Your Role

Role	Description	Go To
 Student	Submit course recognition applications	Student Guide
 Staff	Review and manage all student applications	Staff Guide
 Professor	Evaluate courses for modules you teach	Professor Guide

As a student, you will submit your course recognition application through a 4-step process.

Getting Started

1. Go to the ARIP landing page
2. Click "**Student Portal**"
3. Follow the steps below

Step 1: Personal Data

Enter your personal and academic information.

The screenshot shows the 'Personal Data & Course Information' form in the TUM ARIP system. The form is divided into three main sections: 'Your Information at TUM', 'Previous University', and 'Grading System at Previous University'. Each section contains input fields for various details, with example values provided. A 'Quick Demo Mode' button is visible at the top right of the form area. The left sidebar shows the application steps: Personal Data, Mapping Upload, Catalogue Upload, and Final Review. The bottom right corner features a chat icon.

Required Fields:

Section	What to Enter
TUM Information	Matriculation Number, Course, Degree, Semester
Previous University	University Name, Country, Program, Total Semesters
Grading	Maximum Grade, Minimum Passing Grade

[!NOTE] Demo buttons shown in screenshots are for testing only and removed in production.

Step 2: Mapping Upload

Specify which TUM modules you want recognized and map source courses to them.

Options:

- **Upload PDF** – AI automatically extracts mappings
- **Manual Entry** – Create mappings yourself

Step 3: Catalogue Upload

Upload course catalogue PDFs from your previous university.

Academic Recognition Intelligence Platform

APPLICATION STEPS

- Personal Data
- Mapping Upload
- Catalogue Upload**
- Final Review

Upload Course Catalogues

Upload catalogue PDFs containing descriptions of the content and learning outcomes of all courses that are relevant to this application. These must be official catalogues from your previous university.

3 TUM Modules to match

TUM Module Content Reference

Click on a module to see its content and learning outcomes.

IN2001 - Algorithms and Data Structures (8 ECTS)	Module not found
IN2100 - Software Engineering (6 ECTS)	Module not found
IN2020 - Database Systems (6 ECTS)	Module not found

Drag & drop catalogue PDFs here

or click to browse (multiple files supported)

Back

Demo Fill

Extract & Match

Process:

1. Upload catalogue PDFs (drag & drop or browse)
2. Click **"Extract & Match"** for AI extraction
3. The extracted content will be sent to staff for review

Step 4: Final Review & Submit

Review all your data before submitting.

Final Review & Submit

Review your data before submitting. You can edit your personal details if needed.

Personal Data

Your Information at TUM

Matriculation Number 03712345	Course at TUM Informatics	Aimed Degree Bachelor of Science	Semester at TUM 1
----------------------------------	------------------------------	-------------------------------------	----------------------

Previous University

University Name ETH Zürich	Country Switzerland	Degree Program Computer Science	Diploma/Degree Bachelor of Science
Total Semesters 4	Credit Workload 1 ECTS = 30 h		

Grading System at Previous University

Maximum Grade 6.0	Minimum Passing Grade 4.0
----------------------	------------------------------

Module Mappings

3 Modules • 4 Source Courses

1 IN2001 Algorithms and Data Structures 8 ECTS - CS201 Data Structures (4 Credits, Grade: 1.3) - CS202 Algorithm Design (4 Credits, Grade: 1.7)	Content Content
2 IN2100 Software Engineering 6 ECTS SE301 Introduction to Software Engineering (4 Credits, Grade: 2.0)	Content
3 IN2020 Database Systems 6 ECTS	Content

[!IMPORTANT] Once submitted, you cannot modify your application. Review carefully!

Tracking Your Application

After submission, track your application status.

Status	Meaning
Processing	AI is analyzing your application
Pending Review	Awaiting staff review
On Hold	Additional info requested
Approved	Recognition granted 
Rejected	Recognition denied 

AI Chatbot Assistant

Need help while filling your application? The chatbot is always available!

How to use:

1. Click the **chat icon** () in the bottom-right corner
2. Type your question (e.g., "How long does the process take?")
3. Get instant answers based on TUM guidelines

- Overview
- Tasks**
- Archive

Module Verification Tasks

Review and approve individual module recognitions across all applications.

Search student, module name or code... All Statuses

MODULE	STUDENT	AI SCORE	STATUS	CREATED	
Algorithms and Data Structures IN2001 • 8 ECTS	Max Mustermann ETH Zürich 03712345	61%	Pending Review	Feb 8, 2026	Review →
Software Engineering IN2100 • 6 ECTS	Max Mustermann ETH Zürich 03712345	61%	Pending Review	Feb 8, 2026	Review →
Database Systems IN2020 • 6 ECTS	Max Mustermann ETH Zürich 03712345	63%	Pending Review	Feb 8, 2026	Review →

Prof. Smith

Features:

- Search by student, module, or code
- Filter by status
- View AI scores at a glance
- Click **"Review"** to open details

AI Score Guide:

Score	Meaning	Action
80-100%	Highly equivalent	Likely approval
60-79%	Partial match	Requires Professor Inspection
0-59%	Insufficient	Very careful review / May be rejected by staff

Task Detail & AI Analytics

Click "Review" to see full details and AI analysis.

Actions (for professors)

Button	What It Does
Approve	Grant recognition
Reject	Deny with feedback
Put on Hold	Request more info

[!NOTE] Staff can view these details but professors are responsible for the decision.

AI Analysis Overview:

- **Score Card:** Instant 0-100% match rating
- **Strengths & Gaps:** High-level summary of covered/missing topics
- **Assessment Quality:** reliability metric of the source documents

🔍 Deep Dive: The 5 Analytics Sections

The AI analysis is divided into **5 expandable sections** to help you make an informed decision.

[!CAUTION] **AI is Advisory Only.** The analysis is generated to assist you, but the **Professor always makes the final decision.** You can always download the **original PDF documents** from the "Catalogue Files" card to verify the content manually.

1. Analysis Overview (Default View)

- **Score Ring:** Instant 0-100% equivalence rating.
- **Key Strengths/Gaps:** Bullet points highlighting covered vs. missing topics.

2. Assessment Quality

- **Confidence Score:** How sure the AI is about its result.
- **Input Quality:** Warns if the uploaded PDF was blurry or incomplete.

3. Learning Outcome Details

Use this to see exactly *which* topics matched:

- **Coverage Visualization:** Green squares represent covered TUM learning outcomes.
- **Comparison Table:** Side-by-side view of the student's syllabus vs. TUM requirements.

4. Recognition Suggestions

- **Actionable Advice:** The AI suggests whether to grant full credit, partial credit, or require a supplementary exam.
- **Ambiguity Notes:** Highlights areas where the syllabus was vague.

5. Detailed Technical Analysis (Professor View)

Designed for the chair's decision-maker, this section provides the "why":

- **Methodology:** Explains the logic behind the score.
- **Syllabus Citation:** References specific text from the student's uploaded documents.
- **Gap Reasoning:** Technical explanation of why a topic was marked as missing (e.g., "Student covered *Heaps*, but missing *Fibonacci Heaps*").

[!TIP] Use the **"Recognition Suggestions"** dropdown to see actionable advice (e.g., "Grant 4 ECTS", "Require supplementary exam").

[!IMPORTANT] **AI is advisory only.** The AI analysis helps speed up review but **can be incorrect**. The final decision is always made by a human (the professor). Original PDFs are always available for manual verification.

Discussion with Professors

Professors and staff can discuss modules before making decisions.

Example: Professor Schmidt recommends approval with a note about a supplementary seminar.

How to use Discussion:

1. Professor reviews the AI analysis
2. Professor posts recommendation with reasoning
3. Staff reviews professor input before final decision

Kanban Board

Visual overview of all tasks by status.

Columns: Pending Review → On Hold → Approved / Rejected

Archive

Access historical records of all processed applications.

Professor Guide

As a professor, you **evaluate and make decisions** on course equivalencies for **modules of your chair**.

How It Differs from Staff View

Feature	Staff	Professor
Scope	Overview of all modules	Only modules of your chair
Decision Power	Reject / Put on Hold	Approve / Reject / Put on Hold
Archive	Complete history	Only modules of your chair

Your Workflow

1. **Receive notification** when a student applies for your module
2. **Review the AI analysis** – see match scores and gap analysis
3. **Check source course content** – compare to your module requirements
4. **Use Discussion** – communicate with staff if needed
5. **Make the decision** – Approve, Reject, or Put on Hold

Making a Decision

When approving or rejecting, you must provide a final verdict message.

Steps:

1. Click **Approve** (or Reject)
2. Enter your **Final Verdict Message** (required)
3. Click **Confirm Approval**

The verdict is recorded in history and communicated to the student.

Discussion Feature

Use the Discussion section to:

- Communicate with staff about the application
- Document your reasoning
- Request additional documentation
